How Health Care Performance Changed in Delaware^b

- Indicators that Improved
- Indicators that Worsened
- Indicators with Little or No Change

How Delaware Compares to All States

The Best and Worst in Delaware

Top-Ranked Indicators

Days of hospital staffing shortages during the COVID-19 pandemic

Hospital 30-day mortality

Nursing home residents with an antipsychotic medication

Most Improved Indicators

Infant mortality

Diabetic adults without an annual hemoglobin A1c test

Hospitals with better-than-average patient experience ratings

Bottom-Ranked Indicators

Primary care spending as share of total, ages 18–64

Drug overdose deaths

Children who are overweight or obese

Indicators That Worsened the Most

Home health patients with improved mobility

Children who are overweight or obese

Adults with any mental illness reporting unmet need

Notes

- (a) The 2022 Scorecard rankings generally reflect 2020 data. The 2022 Scorecard added or revised several performance measures, including the addition of seven measures specifically related to performance during the COVID-19 pandemic, since the September 2020 Scorecard report; rankings are not comparable between reports.
- (b) Trend data available for 45 of 56 total Scorecard indicators. Improved/worsened denotes a change of at least one-half (0.5) standard deviation larger than the indicator's distribution among all states over the two time points. No change denotes no change in rate or a change of less than one-half standard deviation.
- (c) All COVID-19 measures are current through the end of March 2022.
- (d) Rates are for states' low-income population, generally those whose household income is less than 200% of the federal poverty level (FPL).
- (e) Income disparity is the difference between the states' low-income and higher-income (generally 400%+ FPL) populations.
- (f) Improvement indicates that the low-income rate improved and the disparity between low- and higher-income populations narrowed; worsening indicates that the low-income rate worsened and the disparity between low- and higher-income populations widened.
- (g) Performance data not available for all groups in every state. While scores from the 2021 Equity Scorecard report are used for ranking states, certain data indicators presented in Table 4 may be more recent than those used in the 2021 report due to updates during the past six months. Certain cancer screening indicators in Table 4 are specific to the Equity Scorecard report.
- (h) States not ranked on health system performance for white people in this report; included for comparative purposes.
- “—” means data not available.
